Chris Wilson

Implementation Engineer | Backend and Integration Engineering | Banking and Payments
Navi Mumbai, India | +91 7755926899 | chriswilson2004.work@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Implementation Engineer with 1+ year taking a bank-grade reconciliation platform from client requirements to production for **IDFC Bank**, processing **400K–500K daily transactions**. Own the full delivery cycle: requirements gathering, BRD-to-FSD translation, configuration, **REST API** and payment-aggregator integrations, UAT, go-live, and on-call production support. Build backend services in **Java Spring Boot** and **Python** and frontend features in **React** and **TypeScript**, over **Apache Kafka**, **PostgreSQL**, and **Oracle**. B.Tech CSE (CGPA 8.91), 100+ DSA problems solved.

Skills

Languages: Java, Python, SQL, PL/SQL, C++, JavaScript, TypeScript
Implementation and Delivery: client onboarding, requirements gathering, BRD and FSD documentation, solution configuration, system integration, UAT, go-live and hypercare, stakeholder management, Agile/Scrum, JIRA, Confluence
Backend Development: Spring Boot, REST API design and integration, microservices, Apache Kafka, message queues, asynchronous processing, job scheduling (cron, Quartz), LDAP authentication, JSON and XML parsing
Data and Databases: Oracle, PostgreSQL, MySQL, MongoDB, stored procedures, ETL pipelines, schema design, indexing, query optimization, data validation
Frontend Development: React, TypeScript, Next.js, Tailwind CSS, HTML, CSS
Cloud and DevOps: AWS (EC2, S3, RDS, IAM, VPC), Docker, Kubernetes, Jenkins, GitLab CI/CD, Git, Linux, Nginx
Domain: payment reconciliation, NEFT/RTGS, SWIFT, NPCI, payment aggregators, general-ledger (GL) mapping, RBI audit compliance
Computer Science: data structures and algorithms, OOP, system design (HLD/LLD), DBMS, operating systems, computer networks

Work Experience

Implementation Engineer Jul 2026 – Present
Osfin.ai (Client: IDFC Bank) *Navi Mumbai, India*

- Led end-to-end implementation of automated reconciliation and live fund movement for IDFC Bank across **Paytm, PayU, Razorpay, and BillDesk**, working directly with bank and client stakeholders to turn BRDs into FSDs, configuration, UAT sign-off, and production go-live
- Integrated **12 third-party REST APIs** into the platform, removing all manual file handoffs, by developing **Python** request handlers with retry-with-exponential-backoff, idempotent request handling, and structured error logging
- Eliminated a recurring class of incorrect general-ledger postings, with zero defect recurrences after release, by developing cross-header validation in a **Java Spring Boot** service that rejects mismatched requests at the **REST API** boundary before the database write
- Decoupled services in a **microservices** platform by integrating **Apache Kafka** producers and consumers, replacing synchronous polling with asynchronous message-queue delivery between backend, batch, and gateway services
- Sustained **99% match accuracy across 400K–500K daily transactions** on **PostgreSQL** and **Oracle**, with fewer than 1,000 daily exceptions, by designing validation layers with assertion checks and query-optimized matching over indexed tables
- Cut batch processing time from three hours to under 30 minutes (**83% faster**) by engineering **Python** and SQL services on scheduled jobs running every 30 minutes with automated failure alerting
- Enabled operations staff to schedule recurring jobs without engineering involvement by shipping a **React** and **TypeScript** cron-expression component that validates Unix cron input and converts it to Quartz format for the backend scheduler
- Integrated a **Claude API** chatbot into the platform so operations teams can query reconciliation status in plain language without raising engineering requests
- Restored authenticated access during a live production outage by tracing a TLS bind failure through `javax.naming.CommunicationException` to a misconfigured Spring **LDAP** context, and resolved **Kubernetes** pod failures across staging and production

Implementation Engineer Intern *Aug 2025 – Jul 2026*

- Implemented **SWIFT and NEFT/RTGS** reconciliation for IDFC Bank, replacing a manual process governed by RBI audit rules and reaching **83% automation with 100% match accuracy**
- Mapped GL codes and built **PL/SQL** transformation logic that splits high-volume network settlement files into reconcilable data tables
- Configured **50+ operational reports and 20+ dashboards** used by bank and internal teams to monitor settlement health
- Delivered NPCI and SWIFT compliance features across **10 two-week Agile sprints**, translating requirements into technical specifications and participating in code review

Projects

EazzyPay, Crypto Payment Platform | Next.js, React, TypeScript, Vercel | Live Site | GitHub 2025

- Built and deployed a live production web application enabling wallet-to-wallet payments keyed on phone number, removing wallet-address handling for users with no blockchain experience
- Implemented a claim-code redemption flow, server-rendered routing, and a responsive **React** and **TypeScript** interface on automated continuous deployment

Blood Bank Donation System | PHP, MySQL, JavaScript, Apache | GitHub Feb 2025 – Apr 2025

- Reduced request processing time by **50%** for **500 users** by designing a normalized **MySQL** schema with foreign-key integrity and indexed lookups, and implementing session-based authentication with role-separated admin endpoints

Thyroid Cancer Risk Classifier | Python, XGBoost, SHAP, Pandas | GitHub Mar 2025 – Apr 2025

- Achieved **87% accuracy** on a held-out test set, evaluated on per-class precision and recall to account for class imbalance, by training an XGBoost classifier on **6,000 records** with SHAP-based prediction explainability

Education

Kalinga Institute of Industrial Technology Sept. 2022 – May 2026
B.Tech in Computer Science and Engineering, CGPA: 8.91 *Bhubaneswar, Odisha*

Certifications

- AWS Academy Cloud Foundations and Architecting, AICTE and EduSkills
- IBM DevOps and Software Engineering
- The Complete Full-Stack Web Development Bootcamp
