Profile Summary

- Software engineer building across a React + TypeScript frontend and Java/Spring Boot and Python services on a bank-grade reconciliation platform processing 500K daily transactions.
- Strong command of PostgreSQL and Oracle — schema design, query optimisation, and data modelling on high-volume financial data.
- Hands-on with REST API development, JSON parsing, and on-call production debugging in a two-week sprint cadence. B.Tech CSE, graduating May 2026.

Experience

Osfin.ai — Data Analyst I (Client: IDFC Bank, Navi Mumbai) **Jul 2025 – Present**

Full-stack contributor on a reconciliation platform: React/TypeScript web app, Java Spring Boot and Python services, PostgreSQL and Oracle backends.

- Shipped the job-scheduling module's cron-expression interface in **React and TypeScript**, letting operations staff schedule recurring reconciliation jobs without engineering involvement, by building a modal component that validates Unix cron input and converts it to Quartz format for the backend scheduler.
- Restored authenticated platform access during a production outage by diagnosing a TLS bind failure in a **Java Spring Boot** service, tracing `javax.naming.CommunicationException` and SSL socket exceptions through `LdapContextSource` configuration to isolate the broken connection.
- Reduced daily reconciliation effort by **99%**, cutting a 3-hour manual analyst process to 30 minutes of automated runtime, by engineering Python and SQL ingestion services with rule-based transaction matching and cron-scheduled jobs executing every 30 minutes.
- Held **99% match accuracy** across 400K–500K daily NEFT/RTGS, SWIFT, and aggregator transactions with under 1,000 daily exceptions, by designing automated cleaning and validation layers over **PostgreSQL** and Oracle schemas with assertion-based checks on every transformation stage.
- Integrated 12 aggregator and payment-system **REST API** endpoints into the reconciliation pipeline, removing manual SFTP handoffs, by building Python request handlers with JSON parsing, retry logic, and structured error logging.
- Delivered NPCI and SWIFT compliance workflows across 10 two-week **sprints** tracked in JIRA and Confluence, by translating stakeholder BRDs into FSDs and implementing the resulting audit-ready rules.

Projects

Thyroid Cancer Risk Classifier | *Python, XGBoost, SHAP* | [GitHub Repository](#) **Apr 2025**

- Built a machine learning model using TIRADS scores and XGBoost to predict thyroid cancer risk, trained on 6,000 ultrasound images and achieving **87% accuracy**. Integrated Explainable AI with SHAP values to interpret and visualise predictions, improving transparency and clinical trust.

Blood Bank Donation System | *PHP, MySQL, JavaScript, Bootstrap* | [GitHub Repository](#) **Apr 2025**

- Launched a full-stack blood bank management system supporting secure donor and hospital registration, request management, and real-time inventory tracking for up to 500 users, with authentication, admin dashboards, and search/filter functionality, resulting in **50% faster** processing of blood requests.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, SQL

Frontend & Backend: React.js, SCSS, Bootstrap, Spring Boot, Spring LDAP, REST API development, JSON/XML parsing

Databases: PostgreSQL, Oracle DB, MySQL, MongoDB, Snowflake — schema design, query optimisation, data modelling

Cloud, DevOps & Practices: AWS (EC2, VPC, RDS, S3, IAM, CloudFront), Azure, Jenkins, GitLab, Bitbucket, CI/CD, Groovy, Agile/Scrum, unit testing, code review, production support, JIRA, Confluence

Education

Kalinga Institute of Industrial Technology

B.Tech in Computer Science and Engineering – CGPA: 8.91

Sept 2022 – May 2026

Bhubaneswar, Odisha

Certifications

- AWS Academy Cloud Foundations & Architecting (AICTE / EduSkills, 2024) · IBM DevOps and Software Engineering
- Full-Stack Web Development Bootcamp · Career Essentials in Data Analysis (Microsoft / LinkedIn)
